

LACY'S RED ANGUS & MC LIVESTOCK

Annual Production Sale

October 28, 2023 - 1:00 PM - Drexel, MO

Welcome to West Central Missouri and the 2023 Lacy's Red Angus/MC Livestock Bull & Female Sale!

This year's sale offering is the result of our efforts that started nearly four years ago when we planned the matings, bred/calved the cows and brought the animals through development. As in the past, we do not chase extremes but rather utilize genetics that we know perform. We are very proud that the vast majority of these animals carry the LACY prefix throughout their pedigrees & are backed by generations of cattle born/raised on our ranch.

Once again, we are delighted to continue working with our marketing partners MC Livestock of Archie, MO. Nick, Callie & Stetson Curtis bring a great eye for cattle, integrity, and a tremendous amount talent & energy to the table.

Our Polled Hereford herd is a joint venture with Debbie Lacy Wheeler & Steve Wheeler. We have increased the number of Polled Hereford bulls & have also included a couple bred heifers into this year's offering. As we move forward, we plan to continue to expand the number of Polled Hereford females offered each fall as we continue to provide all the components to create the great "Red Baldy" female.

All the bulls have been developed here on the ranch utilizing large fescue traps. They have been meticulously hand fed twice a day with a low starch/high roughage Purina developer pellet along with By-O-Reg+ mineral tubs. The heifers have been developed here as well, grazing fescue while being supplemented with fescue hay as well as the same Purina developer at a very minimal rate. Additionally, the heifers have had access to Repro mineral tubs manufactured by Preferred Livestock Supplements.

Carcass ultrasound data has been collected on the yearling bulls & all the bulls have undergone and passed an extensive Breeding Soundness Exam (BSE). The open heifers have been fully vaccinated & subjected to a Reproductive Tract Score (RTS) as well as pelvic measurements. All of this data will be available prior to sale day.

We will continue to offer a select group of commercial Red Angus females. This small group of heifers come from Lacy's Red Angus bull customers, Robert & Gail Perryman of Urich, MO. These females are either sired by "LACY" bulls or bred to "LACY" bulls.

Thank you for your continued interest in our operation. We are confident that we are offering you some of the highest quality cattle to sell anywhere in the country. We firmly believe in our genetics and their ability to perform, especially in fescue country.

You are welcome to view the offering anytime, whether it be at our ranch, on our website or on DV Auction. The sale videos will be available online in mid-October on our website as well as on DV Auction. Whether you intend to bid, buy or just come visit, we truly look forward to seeing you on sale day. If you are unable to attend, the sale will be broadcast live over the internet through DV Auction.

Regards,

Dan & Kelly Lacy - Lacy's Red Angus

Dear Friends & Customers,

Hello and welcome to Lacy's Red Angus & MC Livestock Annual Production Sale. This marks our fourth-year marketing with the Lacy family, and we are excited to once again bring you Red Hided cattle that can excel not only in fescue country but in all regions of America.

2023 has had its set of challenges that's no doubt, but with every challenge comes opportunity. Although many of us have experienced the lack of moisture, some longer than others, now is the time to focus on quality. With the record setting prices in feeder calves, what better time to invest in genetics to advance your operation. When flipping the pages of this catalog you will see progeny out of several of the industry leading sires as well some of the best LACY and MCL bulls to walk the pastures in Drexel, MO.

The bulls in this offering come in an easy calving package that hit the ground with vigor and have packed the pounds on since. Whether your focus is selling feeder calves, replacement females, or seedstock we have you covered. The females in the offering come from the heart of our operation. This year you will have the opportunity to purchase proven females in their prime to help advance your cow herd. Several of these females go back to leading matriarchs in each of our operations. They are eye appealing, structurally correct, big bodied females that have been bred and raised on fescue to require little supplementation to do their job right.

We would like to personally invite you to come by for a visit, enjoy some lunch, and evaluate the cattle on October 28th. As you study this year's offering, if you have any questions feel free to reach out to any of us. If you would like to view the offering or tour the herd prior to sale day, we would be happy to show you around. Thank you for your interest and we look forward to seeing you.

Regards,

Nick, Callie & Stetson Curtis - MC Livestock

Fellow Red Angus Enthusiasts,

There is no denying that we are experiencing record times in the beef cattle industry! Exciting times call for a product that meets the needs of the demand. Those that run stock in the fescue belt of our nation will find what they need between the covers of this sale book. Lacy's Red Angus and MC Livestock bring you stacked generations of fescue adapted and tolerant seedstock with added performance and maternal prowess.

The foundation of the reputation of this set of stock is backed by well over 50 years of selection pressure and dedication to doing the right thing every instance of the selection process. Dale did not allow for fertility or udder issues, having a Hereford background made him very unforgiving of nonsense. Disposition has never been a debatable topic in the sorting pen and that is noticed still today. The overall maternal instinct is instilled in every lot throughout this offering as well as the ability to last and pass every test that any operation has to offer.

These two firms have placed elite Red Angus herd bulls with some of the business' most discriminating breeders with very positive praise. Quite possible one of the hottest sire groups in the country would be by a past sale feature known as Lacy Collusion 115F. These cattle have been well received for a multitude of reasons. A sensible and desirable balance of phenotype and data is certainly the driving force as the overall quality can rival any sire group in the business. Lacy Collusion 115F was not a "fluke" or a "one hit wonder", as he is supported by multiple generations of proven sires and cow families influenced by the stringent selection pressure used by these two outfits yet today.

Collectively, the cattle in this book are the product of years of hard work, disciplined breeding decisions, and strict culling practices to ensure continued customer success. The two firms that stand behind this set of cattle believe in the good stuff known as "common sense" and the guidance and leadership from their known savior. Dale and Kay Lacy may not have known it at the time, but they were building a legacy for future generations! That is why they had and continue to have more repeat business and new business on an annual basis within the program. Please join us for another outstanding set of fescue bred and developed Red Angus and Hereford seedstock from the next generation at Lacy's Red Angus and MC Livestock on Saturday, October 28, 2023, in beautiful Drexel, Missouri!

Enjoy the cattle,

Graham Blagg Jered Shipman Tim Anderson

PREMIUM RED BALDY PROGRAM

Take advantage of hybrid vigor by maximizing the best traits of both Red Angus and Hereford, producing premium replacements.

The program helps producers access genetically verified females that have the best combination of longevity, fertility and adaptability.

The Premium Red Baldy program has the ideal balance of maternal and carcass traits which will yield cattle poised to increase the profitability of the commercial producer.

Premium Red Baldy

- Females only
- Red Angus or Hereford sired
- Top 50% of breed for HB or BMIS Indexes
- Red bodied with bald or brockle face

No enrollment fee, 99¢/tag
Not a USDA Process-Verified Program

Missouri Red Angus Association Fescue Belt Certified Program

Many of us who live in the “fescue belt” have experienced the problems associated with importing newly purchased cattle into our environment. What we’ve seen is a significant percentage of cattle that have not been raised on fescue struggle to perform after being imported onto this “grass we love to hate”. Some animals eventually overcome this issue, but many will not and will eventually be culled from the herd.

Fescue toxicity results from toxins called ergot alkaloids, which are produced by a fungus called endophyte that grows within the fescue plant. Cattle experiencing fescue toxicosis may exhibit rough hair coats, heat stress, suppressed appetite, poor growth rates, reduced reproductive performance, and in some cases lost tail switches or even hooves. The decreased animal performance seen during the “summer slump” of cool-season pastures is made even worse by these toxic effects of fescue.

Research on the subject of fescue management has been done for years. Several strategies can be used to mitigate the toxic effects of fescue, including removal or suppression of seedheads, overseeding of pastures with legumes or other forages, and good mineral supplementation programs. However, fescue remains a serious challenge. The USDA estimates fescue toxicosis costs the U.S. beef industry an estimated \$600 million to \$1 billion annually in lost revenue because of reduced reproductive and growth rates in cattle herds.

The entire state of Missouri is situated within the fescue belt. Since fescue was introduced into our region, Missourians have built their herds retaining only genetics that have proven to be “fescue tolerant.” When looking for Red Angus genetics, look for the MORAA FBC logo & cattle that have “Bred-in Fescue Tolerance.”

THE BULL GUARANTEE

Unless otherwise noted, all the breeding age bulls will have passed a breeding soundness exam prior to the sale & are guaranteed by the seller as outlined by the “Red Angus Association of America Suggested Terms & Conditions”. This guarantee does not cover injury, death or poor management.

PROPER MANAGEMENT OF YEARLING BULLS

INTRODUCTION

Yearling bulls represent a large commitment to beef operations. Besides their purchase price, they are the future genetic material of the herd that can influence several generations of stock. Because yearlings still have a significant amount of growth and development ahead of them, they require a higher level of care and management than their older counterparts. This is especially true now as yearling bulls can possess considerably more genetic potential for growth than their ancestors.

PREBREEDING SEASON MANAGEMENT

Nutritional Management

One of the most common complaints of yearling bull purchasers is the run down condition these bulls can exhibit after their first breeding season. This situation can be largely avoided with good bull management. Whether the bulls were developed on the ranch, in a commercial facility, or at a centralized bull test, they were probably fed to gain from 2.5 to 4.0 pounds per day from weaning to one year of age. After coming off of test, and until they are turned out with females, they should continue to gain around 2.0 pounds per day.

Dry matter intake, energy and protein requirements as well as diet formulation is provided as a management aid. Bulls grazing a grass paddock may need to receive 8 to 13 pounds of grain per day, similar to those on dry hay. Some will argue that bulls should not be pampered with grain supplements, but to insure a long and reproductive life, their basic nutrient requirements must be met. Quality of forage is extremely important to formulating proper bull diets. Many diet formulations can easily satisfy yearling bull maintenance and growth requirements. For example, some producers will allow bulls to graze cereal grain pastures with minimal supplementation, while others will have to feed a complete diet in a drylot situation.

Protein Requirement

After achieving their first birthday, bull's protein requirements settle to about 10% of their total diet, depending on their dry matter intake. Usually this requirement can be met by adding one pound of a protein supplement per day to the grain portion of the diet. If high quality forage (pasture or hay) is fed, the additional protein supplement may not be needed. Forage testing and balancing the diet will pinpoint supplemental needs.

Mineral Requirements

Calcium and phosphorus are major minerals. Diets that contain approximately .40% calcium and .20% phosphorus are sufficient to meet dietary goals. The ration between calcium and phosphorus should be maintained at 2:1 or greater. In addition, trace mineral requirements should be met. Research has shown that feeding zinc at 60 ppm of the diet is beneficial to male reproduction. Other trace minerals like copper, manganese, and selenium should be monitored. Many commercial sources of trace minerals are available, but if desired a mixture of 40% dicalcium phosphate, 20% limestone, 30% trace mineral salt and 10% Selenium 90 premix can be used.

Vitamin Requirement

Any diet that includes high-quality, green forages should provide enough vitamin A to meet the yearling bull's requirement. Vitamin A is inexpensive to feed, and therefore diet fortification near 30,000 IU per day would be cost effective. If forages are weathered and/or of low quality, an intramuscular injection of 3 million IU of vitamin A is advisable. Injectable vitamin A will maintain adequate liver stores for over 100 days.

BREEDING SEASON MANAGEMENT

Number of Females

Setting absolute guidelines for cow-to-bull ratio is difficult because there are several variables that have an impact on this number. Examples are a bull's age, size, condition, and sex drive. Environmental factors like: size of the breeding pastures, type of terrain, climate, and length of the breeding season can also affect the correct cow-to bull ratio. Absolutely, a yearling bull will not be able to service as many cows as an older counterpart. As a rough guideline, however, the working range is approximately 10 to 25 females per yearling bull during a 45 to 60 day breeding season.

Length of Breeding Season

A maximum of 45 to 60 days is an ideal length of breeding season for yearling bulls. Ninety days is an absolute maximum. One method of saving wear and tear on a yearling is to turn him out after an older bull has been with the herd for the first one or two heat cycles. Some producers rotate bulls in and out of pastures to assure a lazy bull's mates can get covered by another. Regardless of the management style, it is not advantageous to run yearling bulls with cows for long periods of time. They will waste a considerable amount of energy chasing cows and losing body condition instead of building up reserves for the next breeding season.

Try to observe the yearling bull closely to make certain he is detecting heat and breeding cows. Also, keep an eye on his condition. If he is getting too thin and rundown, he needs a rest. Thin bulls are more apt to hurt themselves, become less fertile, and have increased nutritional needs after the breeding season. Yearling bulls should not be pastured mated to cows that are extremely larger than themselves. Physically, this height mismatch may cause injury and failure to mate properly.

AFTER THE FIRST BREEDING SEASON

Feeding

Yearling bulls will probably lose from 100 to 300 pounds during their first breeding season. In addition to gaining back this weight during their first rest, they must also gain enough body mass as to achieve 75% of their mature weight by their second birthday. For example, if a bull's potential mature weight is 2,000 pounds, he should weigh at least 1,500 pounds at two years. If he weighed 1,250 pounds at turn-out time as a yearling and lost 200 pounds during the breeding season, he would need to gain about 2.0 pounds per day during the nine months until his second birthday. In order to gain 2.0 pounds per day, coming 2-year-old bulls may need to be fed 13 pounds of grain, protein supplement, and a full-feeding of hay. High quality forages could be utilized to reduce the grain and supplement portions of the diet. A word of caution: do not try to bring a bull back too fast with too much grain because of risk of foundering him.

Health Management

In the fall, after the first breeding season, treat the bull for internal and external parasites. The following spring, when he is two-years old, deworm him again and give him annual booster vaccinations against the diseases listed earlier.

LOT 1

LACY FORWARD PROGRESS 077K

- A high-quality specimen to lead off the Lacy Collusion 115F sire group. He's stout from end to end with plenty of capacity and herd bull character.
- Combines a genetic profile excelling in calving ease and carcass merit, traits highly sought after in today's top seedstock.
- Powerful performance ledger, posting top tier weights while ratioing 106 for both REA and IMF.
- His dam, C-Bar Stony A302 is one the premier females in the Red Angus breed. She has been a cornerstone in several breeding programs across North America.
- Lacy Forward Progress 077K is also supported by Lacy Lakota 8105, the highest dollar generating female in the Lacy's Red Angus program. Maternal excellence lines his pedigree!
- Top 3% REA, top 20% CW, top 25% GM, CED, CEM, MARB, top 30% BW, top 40% ProS, top 45% MILK.
- One of the greatest herd sire prospect ever offered in Drexel, Missouri!
- *Retaining 1/3 Semen Interest.*

AGE ADVANTAGED BULL

- Lacy Full Tank 020K is as stout built and massive muscled as any bull in this year's offering.
- Combines the Lacy Full Tank 006D sire line with the legendary Lacy Lakota 8105 cow family.
- Boast the top weaning weight in the sale at 745 lb., while only being a 60 lb. calf at birth.
- The dam of Lacy Full Tank 020K, Lacy Lakota 8105 012H, is a full sister to Lacy Osceola 016H and Lacy Ozark 017H. 012H was a member of the 2021 Cattlemen's Congress Reserve Grand Champion Pen of Three Red Angus Heifers. The next generation from the famed 8105 cow family!
- Top 10% HB, top 15% ProS, REA, top 20% MARB, top 25% MILK, top 30% CW, top 40% GM, WW.

AGE ADVANTAGED BULL

- Starting off the Hereford offering with a big volume herd sire prospect that offers an abundance of shape and that proud herd bull presence that we all admire.
- 014K is an elite Hereford prospect for his maternal index values, a perfect baldy heifer maker.
- The R Leader 6964 progeny are some of the most popular cattle in the Hereford breed.
- 014K is a full brother to the resident herd sire here in Drexel, Missouri known as RHF 6964 Work 0026H ET. Genetic consistency is built in with this rugged herd sire candidate!
- Top 1% BMI, BII, top 5% CED, top 10% BW, MARB, top 20% CHB, top 25% CW, top 25% SC, top 40% MILK.

**Contact us to see how Purina® All Seasons™
Cattle Nutrition Program gives you flexible,
convenient solutions for your herd.**

SECOND BRAIN...

The gut is the largest immune organ in the body and considered the second brain.

GUT-BRAIN CONNECTION

Gut health along with immune support need to be part of the conversation in all nutrition plans.

STRESS HAPPENS

Learn how we can help minimize stressors on cattle at all stages of life.

CF²⁰ COATING TECHNOLOGY

Ask us how our coating technology is similar to a chocolate chip cookie.

REPRODUCTION

Ask us how our products can positively impact hormones that influence fertility.

MAXIMUM PERFORMANCE.

STARTS WITH THE GUT.

ARE YOU GETTING **TOP PERFORMANCE?**
