LACY'S RED ANGUS & MC LIVESTOCK

Annual Production Sale

OCTOBER 24, 2026 AT 1:00 PM

DREXEL, MISSOURI

CCi LIVE

We are excited to welcome you to West Central Missouri for our 2026 Annual Production Sale. Whether you are a returning customer or joining us for the first time, we sincerely appreciate your interest in our program and the genetics we have to offer.

We are pleased to continue our partnership with MC Livestock. Nick & Callie Curtis, along with their son Stetson, have been an integral part of this sale for nearly a decade. We appreciate their friendship, integrity, and contributions that make this sale possible each year.

The cattle in this offering result from years of planning and careful decision-making. The matings that produced these animals were made years ago, followed by calving, selection, and development. We believe good cattle are the result of thoughtful decisions made consistently over time. This is why we do not chase the latest trends or EPD extremes.

Our goal is to produce practical, balanced cattle that work in the real world. Maternal value, fertility, and longevity are important priorities in our breeding program. Cows need to work in our environment, raise good calves, breed back, and remain productive for many years. We believe the value of a breeding animal is measured by the kind of calves it raises and the contribution it makes to a herd over time. The cow herd remains the foundation of our program.

This year's offering includes the large majority of 2025 Fall-born females, a stout group of yearling bulls, and an expanded selection of age advantage bulls (including a limited number of Polled Herefords). We have also utilized hybrid vigor to produce a strong set of Red Baldy bulls and females.

All bulls in this offering have been developed here on the ranch in large fescue traps. They have been bunk-fed twice daily with a low-starch, high-roughage developer pellet along with high-quality mineral tubs. Our goal is to develop bulls that are sound, athletic, and ready to go to work while allowing them to mature naturally in our environment. The heifers have been developed here as well, grazing fescue while receiving a minimal amount of developer pellet as well as VitaFerm Concept+Aid mineral.

All bulls and females have undergone genomic testing, with results incorporated into their EPDs. All bulls have undergone a Breeding Soundness Exam (BSE), and the open heifers have been fully vaccinated and evaluated through Reproductive Tract Scoring (RTS) and pelvic measurements. This information will be available prior to sale day.

We will also offer a select group of percentage Red Angus females, including an exceptional group of Red Baldy females and a small group of heifers from Perrymann Farms of Urich, Missouri. These females are all sired by LACY bulls.

We appreciate your interest in our operation and your consideration of these genetics for your herd. We invite you to view the offering at the ranch, on our website, or on CCI Live. Sale videos will be available online in mid-October. If you are unable to attend in person, the sale will be broadcast online via CCi.Live. Whether you plan to bid, buy, or simply come visit, we look forward to seeing you on sale day!

Regards,

Dan & Kelly Lacy
Derek & Amy Lacy | Cooper, Emmy & Reid
Lacy's Red Angus

It is our pleasure to welcome you to Drexel, Missouri, for our Annual Production Sale with Lacy's Red Angus. 2026 marks our seventh year working alongside the Lacy family, and we are genuinely grateful for the partnership we have built and the shared commitment to producing cattle that are useful, functional, and built to make a lasting impact.

This year's offering represents another important step forward for MC Livestock. You will find several new sire groups throughout the sale, including a strong representation of sires either raised by MC Livestock or currently walking our pastures. In fact, majority of the MCL cattle offered this year are sired by bulls raised in our program or bulls we have selected to use within our own herd. We believe strongly in using our own genetics, evaluating them in our environment, and allowing the results to guide the direction of our program.

Our goal is simple: to produce cattle that combine quality, performance, phenotype, soundness, and longevity—and cattle that will work in the real world. Our cattle are born, bred, developed, and selected under the same fescue-based conditions that our customers face. We believe that environment provides an honest test, and we take great pride in offering genetics that have proven themselves here before they are offered to you.

We are particularly excited about this year's bull offering. Whether you are looking for an age-advantage bull or a yearling, we believe this is the deepest and most consistent set of bulls we have offered to date. There is a tremendous amount of quality throughout the offering, with sire groups that represent the direction we are taking our program and the kind of genetics we believe will create value for our customers for years to come.

The female offering features both spring-bred heifers and fall open yearling heifers, backed by some of the most proven cow families in our program. We believe these females provide an opportunity to acquire the maternal foundation and genetic predictability necessary to build a productive herd for the future.

Thank you for your continued interest, confidence, and support. Whether you have been a customer since the beginning or are considering your first purchase, we sincerely appreciate the opportunity to earn your business and look forward to visiting with you on sale day. If you are unable to join us in person, we invite you to participate online at CCi.Live. We also encourage you to view the cattle prior to sale day. Our gates are always open, and visitors are always welcome.

We look forward to seeing you in Drexel!

Nick, Callie & Stetson Curtis
MC Livestock

Lacy's Red Angus is one of those solid, foundation driven seed stock programs that has never wavered from their humble and disciplined beginnings. Dan continues to conduct business as his late father Dale and his approach to breeding and selecting cattle still has the original focus of producing those that can thrive and continue to be profitable in the rigorous "fescue belt."

The customer base has been built over the past five decades with much of those folks second or third generation of their families still doing business with the outfit from Drexel, MO. Dan has done a masterful job of plugging the right sires in over the years and an even better job of sorting the cows that were not paying their way and that is why the cattle continue to improve and merit investment from those who believe in the program and the people behind the brand.

Things have shifted a little bit over the past few years with the transaction between Lacy's Red Angus and MC Livestock. Nick and Callie Curtis along with their son Stetson made a significant investment into a set of females from Dan and Kelly. Since that business transaction the young, enthusiastic family has been a very important part of this annual marketing event. They are aggressive and progressive in thought and approach and as they continue to sort, improve, and grow their operation, it will only continue to enhance the big picture for fescue driven, Red Angus seedstock on the fourth Saturday of October for the years ahead.

As most know, a year ago, Dan faced some serious health challenges and with that he realized that he should consider initiating the passing of the reins to the next generation of the Lacy tribe. Instantly Derek, Amy, and their three children became a bigger part of the day to day making four generations of the Lacy Family a part of this cornerstone program. The cattle have been sought after and have remained useful for their new homes with longevity in service and the females return with diligence in their production ability as well. This year's set promises to impress as it is one of the deepest sets ever offered in terms of sheer quality and industry value.

We hope that you can join these great families for their annual production sale on October 24, 2026. If you should need assistance with additional information, selection guidance, or sight unseen purchasing options, do not hesitate to call the families or any of the Innovation AgMarketing staff for those needs. Our goal is to make your investment experience as convenient and trouble free as possible. In the meantime, thank you for your interest and please enjoy the cattle.

Enjoy the cattle,

Graham Blagg *Jered Shipman* *Tim Anderson* *Tucker Wagner*

Missouri Red Angus Association

Fescue Belt Certified Program

Many of us who live in the "fescue belt" have experienced the problems associated with importing newly purchased cattle into our environment. What we've seen is a significant percentage of cattle that have not been raised on fescue struggle to perform after being imported onto this "grass we love to hate". Some animals eventually overcome this issue, but many will not and will eventually be culled from the herd.

Fescue toxicity results from toxins called ergot alkaloids, which are produced by a fungus called endophyte that grows within the fescue plant. Cattle experiencing fescue toxicosis may exhibit rough hair coats, heat stress, suppressed appetite, poor growth rates, reduced reproductive performance, and in some cases lost tail switches or even hooves. The decreased animal performance seen during the "summer slump" of cool-season pastures is made even worse by these toxic effects of fescue.

Research on the subject of fescue management has been done for years. Several strategies can be used to mitigate the toxic effects of fescue, including removal or suppression of seedheads, overseeding of pastures with legumes or other forages, and good mineral supplementation programs. However, fescue remains a serious challenge. The USDA estimates fescue toxicosis costs the U.S. beef industry an estimated $600 million to $1 billion annually in lost revenue because of reduced reproductive and growth rates in cattle herds.

The entire state of Missouri is situated within the fescue belt. Since fescue was introduced into our region, Missourians have built their herds retaining only genetics that have proven to be "fescue tolerant." When looking for Red Angus genetics, look for the MORAA FBC logo & cattle that have "Bred-in Fescue Tolerance."

THE BULL GUARANTEE

Unless otherwise noted, all the breeding age bulls will have passed a breeding soundness exam prior to the sale & are guaranteed by the seller as outlined by the "Red Angus Association of America Suggested Terms & Conditions". This guarantee does not cover injury, death or poor management.

PROPER MANAGEMENT OF YEARLING BULLS

INTRODUCTION

Yearling bulls represent a large commitment to beef operations. Besides their purchase price, they are the future genetic material of the herd that can influence several generations of stock. Because yearlings still have a significant amount of growth and development ahead of them, they require a higher level of care and management than their older counterparts. This is especially true now as yearling bulls can possess considerably more genetic potential for growth than their ancestors.

PREBREEDING SEASON MANAGEMENT

Nutritional Management

One of the most common complaints of yearling bull purchasers is the run down condition these bulls can exhibit after their first breeding season. This situation can be largely avoided with good bull management. Whether the bulls were developed on the ranch, in a commercial facility, or at a centralized bull test, they were probably fed to gain from 2.5 to 4.0 pounds per day from weaning to one year of age. After coming off of test, and until they are turned out with females, they should continue to gain around 2.0 pounds per day.

Dry matter intake, energy and protein requirements as well as diet formulation is provided as a management aid. Bulls grazing a grass paddock may need to receive 8 to 13 pounds of grain per day, similar to those on dry hay. Some will argue that bulls should not be pampered with grain supplements, but to insure a long and reproductive life, their basic nutrient requirements must be met. Quality of forage is extremely important to formulating proper bull diets. Many diet formulations can easily satisfy yearling bull maintenance and growth requirements. For example, some producers will allow bulls to graze cereal grain pastures with minimal supplementation, while others will have to feed a complete diet in a drylot situation.

Protein Requirement

After achieving their first birthday, bull's protein requirements settle to about 10% of their total diet, depending on their dry matter intake. Usually this requirement can be met by adding one pound of a protein supplement per day to the grain portion of the diet. If high quality forage (pasture or hay) is fed, the additional protein supplement may not be needed. Forage testing and balancing the diet will pinpoint supplemental needs.

Mineral Requirements

Calcium and phosphorus are major minerals. Diets that contain approximately .40% calcium and .20% phosphorus are sufficient to meet dietary goals. The ration between calcium and phosphorus should be maintained at 2:1 or greater. In addition, trace mineral requirements should be met. Research has shown that feeding zinc at 60 ppm of the diet is beneficial to male reproduction. Other trace minerals like copper, manganese, and selenium should be monitored. Many commercial sources of trace minerals are available, but if desired a mixture of 40% dicalcium phosphate, 20% limestone, 30% trace mineral salt and 10% Selenium 90 premix can be used.

Vitamin Requirement

Any diet that includes high-quality, green forages should provide enough vitamin A to meet the yearling bull's requirement. Vitamin A is inexpensive to feed, and therefore diet fortification near 30,000 IU per day would be cost effective. If forages are weathered and/or of low quality, an intramuscular injection of 3 million IU of vitamin A is advisable. Injectable vitamin A will maintain adequate liver stores for over 100 days.

BREEDING SEASON MANAGEMENT

Number of Females

Setting absolute guidelines for cow-to-bull ratio is difficult because there are several variables that have an impact on this number. Examples are a bull's age, size, condition, and sex drive. Environmental factors like: size of the breeding pastures, type of terrain, climate, and length of the breeding season can also affect the correct cow-to bull ratio. Absolutely, a yearling bull will not be able to service as many cows as an older counterpart. As a rough guideline, however, the working range is approximately 10 to 25 females per yearling bull during a 45 to 60 day breeding season.

Length of Breeding Season

A maximum of 45 to 60 days is an ideal length of breeding season for yearling bulls. Ninety days is an absolute maximum. One method of saving wear and tear on a yearling is to turn him out after an older bull has been with the herd for the first one or two heat cycles. Some producers rotate bulls in and out of pastures to assure a lazy bull's mates can get covered by another. Regardless of the management style, it is not advantageous to run yearling bulls with cows for long periods of time. They will waste a considerable amount of energy chasing cows and losing body condition instead of building up reserves for the next breeding season.

Observation

Try to observe the yearling bull closely to make certain he is detecting heat and breeding cows. Also, keep an eye on his condition. If he is getting too thin and rundown, he needs a rest. Thin bulls are more apt to hurt themselves, become less fertile, and have increased nutritional needs after the breeding season. Yearling bulls should not be pastured mated to cows that are extremely larger than themselves. Physically, this height mismatch may cause injury and failure to mate properly.

AFTER THE FIRST BREEDING SEASON

Feeding

Yearling bulls will probably lose from 100 to 300 pounds during their first breeding season. In addition to gaining back this weight during their first rest, they must also gain enough body mass as to achieve 75% of their mature weight by their second birthday. For example, if a bull's potential mature weight is 2,000 pounds, he should weigh at least 1,500 pounds at two years. If he weighed 1,250 pounds at turn-out time as a yearling and lost 200 pounds during the breeding season, he would need to gain about 2.0 pounds per day during the nine months until his second birthday. In order to gain 2.0 pounds per day, coming 2-year-old bulls may need to be fed 13 pounds of grain, protein supplement, and a full-feeding of hay. High quality forages could be utilized to reduce the grain and supplement portions of the diet. A word of caution: do not try to bring a bull back too fast with too much grain because of risk of foundering him.

Health Management

In the fall, after the first breeding season, treat the bull for internal and external parasites. The following spring, when he is two-years old, deworm him again and give him annual booster vaccinations against the diseases listed earlier.

AGE ADVANTAGED BULL

- Cattlemen who prefer power should spend time here. LACY Outrider 009N is a stout ended son of DUFF Red Warrior 21104 from C-BAR Stony 106J, blending one of the more progressive phenotype and performance combinations with one of the breed's most recognizable cow families.
- An athletic, rugged bull with extra shape through his rib and quarter and the presence that commands the pasture.
- He delivered the heaviest adjusted weaning weight among the opening features at 859 lbs. with a 110 ratio, then carried that advantage to 1,321 lbs. and a 106 yearling ratio.
- The numbers reinforce the visual power. He ranks in the top 2% YW and ADG, top 3% WW, top 4% REA, and top 5% YG.

MCL CHARGED UP 5012

- MC Livestock brings a calving ease oriented son of Bieber CL Energize F121 in MCL Charged Up 5012. He came small at birth and has not let up since.
- He is smooth patterned, mobile, and designed to cover country.
- His top 5% ADG, top 8% CED and HPG, top 10% CEM, top 14% BW, top 17% GM, and top 19% ProS support his practical use with added value post birth.
- A herd sire prospect that will see heavy use in the aggressive AI program at MC Livestock.
- ***Retaining 1/3 Semen Interest.***

BIEBER CL ENERGIZE F121
SIRE OF LOTS 6 & 7

LOT 7

MCL CAGS 5004

- MCL CAGS 5004 is another Bieber CL Energize F121 son, this time backed by the donor dam LACY Ruby 8105 485. His pedigree brings dependable maternal genetics into a balanced, moderate package. He is a maternal brother to MCL Dawson 2519, the PIE Quarterback 789 son that has seen heavy use in the MC Livestock breeding program.
- He's a clean fronted, deep bodied bull that reads functional from the ground up.
- He does not sacrifice growth for calving ease, as he posted 790 lbs. adjusted at weaning and 1,262 lbs. at a year.
- He ranks top 6% DMI, top 14% BW, and top 19% CED.
- ***Retaining 1/3 Semen Interest.***

MCL HARD DRIVE 5001

- The SC Hard Drive H508 cattle have earned a place in the MC Livestock program, and MCL Hard Drive 5001 carries that influence from a productive Brown JYJ Redemption Y1334 dam.
- He's a moderate, masculine bull with added dimension and a practical build for stockmen prioritizing muscle and durability. He is a maternal brother to the very popular MCL Benelli 4001, the son of DUFF Red Warrior 21104 that was purchased by JM Cattle Company of Gause, Texas.
- His top 2% YG, top 3% FAT, and top 28% REA suggest valuable carcass shape.

MCL BENELLI 4001
MATERNAL BROTHER TO LOT 10

LOT 11

MCL HARD DRIVE 5003

- MCL Hard Drive 5003 comes dark red with added stretch and length. The SC Hard Drive H508 son is out of the trustworthy LACY Lakota 8190 483. 483 is the dam of MCL Red Cloud 0512 that has worked back in the program for several years now.
- 5003 recorded a 109 weaning ratio and 107 yearling ratio, finishing at 1,228 lbs. adjusted.
- Top 2% YG, top 3% REA and FAT, and top 19% MILK complement a square, muscular build and a strong maternal base.

YEARLING BULL

- What a way to lead off the yearling division with this MCL Dawson 2519 stud!
- MCL Amplified 5528 brings the backing of the mainstay LACY Collusion 115F and the integral "Stony" cow family.
- His attractive, muscular design and added stretch make him a high impact herd sire prospect with the performance to match his presence.
- He exploded to a 1,350 lb. adjusted yearling weight and a 113 ratio.
- That combination of growth, muscle, and carcass value places him among the most powerful genetic packages MC Livestock offers.
- He ranks in the top 1% ADG, top 2% CW and REA, top 3% GM and YW, top 7% YG, and top 9% WW. One of the absolute best herd sire prospects that has EVER been produced in the MC Livestock breeding program!
- ***Retaining 1/3 Semen Interest.***

LOT 15

MCL ENCORE 5538

- MCL Encore 5538 is a balanced son of MCL Dawson 2519 from a RED U2 Malbec 195D daughter, MCL Lana 096E 2539. 5538 is a true product of the thoughtful, stringent program.
- We love this dark red bull's width and softness, all in a package that commands your attention. He posted 703 lbs. adjusted at weaning and 1,265 lbs. at a year, both above contemporary average.
- The build and the figures to make you want to keep EVERY heifer.
- He ranks in the top 2% HPG, top 18% MILK, and top 30% MARB.
- ***Retaining 1/3 Semen Interest.***

YEARLING BULL

- One of three flushmate brothers by DUFF Red Warrior 21104 from LACY Lakota 8105 084C, a maternal sister to the legendary LACY Collusion 115F. The "Red Warrior" sired cattle have been consistent highlights the past two years, and 025N has the phenotype and performance to continue that momentum.
- He is bold ribbed, stout hipped, and masculine through his front end, yet retains the mobility necessary for heavy use.
- LACY Warrior 025N leads the trio with an 823 lb. adjusted weaning weight and carries that power to 1,287 lbs. at a year.
- He should sire a set of feeder cattle that grow and mouth-watering females.
- His EPD package includes top 12% ADG, top 14% YW, top 18% STAY, and top 19% WW.

LOT 25

LACY WARRIOR 026N

- LACY Warrior 026N is an impressive herd sire prospect.
- The stud is sired by DUFF Red Warrior 21104 and out of LACY Lakota 8105 084C. He reached 1,278 lbs. adjusted at a year.
- This is a stout, athletic bull with the pedigree consistency to sire a big, uniform set of calves.
- Top 10% ADG, top 12% YW, and top 16% WW fit his long bodied, performance driven build.

YEARLING BULL

- MCL In Motion 5503 brings a powerful blend of LSF DLL Locomotion and the "Lakota" cow family for a pedigree built for consistency.
- His added length, body, and muscular shape are paired with the mobility needed for a high-use herd sire.
- He recorded a 109 weaning ratio and 106 yearling ratio, reaching 704 lbs. adjusted at weaning and 1,271 lbs. at a year.
- Top 6% HPG, top 22% MILK, and top 29% MARB add useful maternal and end product value.
- A true phenotype standout that will turn heads on sale day!

YEARLING BULL

- MCL Red Label 5520 is by the $80,000 SHAG Red Label 120 that has sired cattle that are both phenotypically and genetically pleasing.
- Balanced ratios of 101 for both weaning and yearling performance fit a bull that is proportionate, deep sided, and square through his hip. He reads as a complete, no-holes herd sire prospect rather than a single trait specialist.
- Rest assured you will be keeping every daughter for quite some time.
- He ranks in the top 5% STAY, top 7% HB, and top 13% ProS.

YEARLING BULL

- This Red Baldy herd sire prospect brings in the influence of Bieber CL Energize F121.
- Growth, performance, and a solid set of Red Baldy replacements or feeder calves will sure be the product of utilizing this stud.
- His 1,373 lb. adjusted yearling weight is the heaviest in this closing group.
- Top 2% YG and FAT, top 10% ME, and top 21% WW and REA complement a rugged, high-performing build.

LOT 44

LACY HARDY 037N

- LACY Hardy 037N combines the Hereford influence with a program mainstay, LACY Signature 459.
- Deep bodied, wide based, and masculine, he is built for low input usefulness and a calf crop with added shape.
- A moderate, stout herd bull ready to work!
- He ranks in the top 1% ME, top 2% FAT, and top 3% YG.

CMF 306D HARDY 586H
SIRE OF LOTS 44 & 45

LOT 45

LACY HARDY 050N

- Performance is the story on LACY Hardy 050N. This powerful, rugged bull posted an 832 lb. adjusted weaning weight and continued to 1,307 lbs. adjusted at a year.
- He is stout featured, wide based, and built with the substance cattlemen expect in a working herd bull.
- His top 3% FAT, top 7% HB, top 13% REA, and top 19% WW add relevant genetic support to an otherwise solid performance and phenotype package.

How to Bid Online...

- **As a buyer**, you do not need an account or to login to watch the sale but you must have a validated account to bid.

- After you are logged in, you must proceed to the sale page for any and every auction and click **"Get Buyer Number."** Some auctions require a pass-code to obtain a buyer number even after you are approved by CCI.live. Pass codes generally come from the sale manager or ranch for that particular sale.

- CCI.live will operate with ease on a **cellular device, laptop, desktop or tablet**.

- A **modern or current browser** is important and will make your experience better. You do not need to install the app on cellular devices to watch a sale. CCI.live is a browser-based application meaning it will play on most new browsers, but you can also download the CCI.live app at the Apple App Store or through Google Play.

- **For successful bidding you must have good Internet service!** It is very important to be stationary. If you are driving and bidding, expect to have some service issues. If you are stationary on a good device, with healthy Internet, expect a very successful bidding environment. If you have slow Internet watch the "asking price" on the screen - it is real time and refresh your browser if you feel like you have some lag.

- **Support line open during all sales. 405-400-9505 -** Please contact the ranches for invoices and trucking.

OPEN HEIFER

- This pair of sisters come from one of the most proven combinations in the offering. The cattle sired by DUFF Red Warrior 21104 have consistently generated for the program with paternal siblings highlighting the 2025 sale, including the $50,000 LACY Ground Game 008M selected by Shoal Creek Land and Cattle and the $28,000 LACY War Paint 086M purchased by Holton Cattle Company.
- LACY Lakota 084C 036N links that influence with the iconic LACY Lakota 8105, whose stamp is seen all throughout pages of this sale book.
- Long bodied, stout featured, and powerful through her center, she offers the performance and genetic reach to develop into a high impact donor.
- She recorded 660 lbs. adjusted at weaning and 1,103 lbs. at a year.
- Her EPD profile includes top 1% YW, top 2% WW and ADG, top 7% CW, top 17% FAT, top 31% STAY, and top 34% GM and REA.

- The darker muzzled, darker flushmate sister is sure one to be admired.
- She carries the influence of the sire that has generated cattle of both sexes that generated immense quality the past two years. She combines it with the proven and reliable LACY Lakota 8105. Generations of the "Lakota" family give this female the predictability to remain relevant long after sale day.
- She is square made, bold ribbed, and maternal made with the kind of practical build that should make her mark on her next program.
- Her 669 lb. adjusted weaning weight leads the pair.
- She ranks in the top 14% WW and YW, top 16% ADG, top 22% FAT, top 34% STAY, and top 35% YG.
- ***Selling Choice between Lots 101A & 101B.***

OPEN HEIFER

- MCL Lakota 3501 5541 introduces the first MCL Night Moves 3015 daughter in the female offering. Her pedigree combines Bieber CL Energize F121 with the "Lana" and "Lakota" cow families.
- Her extra body, substance, and brood cow presence are supported by some real growth and performance. She pressed the scales to 664 lbs. adjusted at weaning with a 110 ratio, then maintained a 101 yearling ratio.
- This is a forward-thinking female with the performance, maternal foundation, and genetic package to build around.
- Her EPD profile includes top 2% FAT, top 6% YG, top 10% HPG, top 11% MILK, top 15% STAY, top 16% WW, top 20% YW, top 24% HB, top 27% ProS, and top 29% ADG.

LOT 105

MCL REBALAS 300 5501

- Maternal value leads the discussion on MCL Rebalas 300 5501. She is by MCL Power Play 3018 and out of CCF Gold Bar 0251 daughter from the long standing "Rebalas" family.
- Moderate, deep flanked, and easy fleshing, she offers the practical cow shape and maternal predictability to work in a wide range of environments.
- Her maternal figures correspond with her phenotype. She ranks in the top 2% HB and STAY, top 3% ProS, top 4% YG, top 7% REA, top 17% MARB, top 21% HPG, top 24% GM, top 27% FAT, top 30% MILK, and top 33% ME.

Commercial Female Offering

Perrymann Farms - Urich, MO (660) 890-1149

Robert Perrymann has been a long-time customer and friend of the Lacy's Red Angus breeding program. The Perrymann family has a top shelf commercial cow-calf operation in Urich, Missouri. Each year, Robert invests in genetics to better his herd. This set of females are straight from the heart of the Perrymann Farms replacement pen!
